

Job Description – Product Engineer [MPH042] Meyreuil (Aix-en-Provence), France

Position Summary

Based in Meyreuil (located near Aix-en-Provence, south of France), you will be as a member of our Test and Product Engineering team, in charge of industrializing products like secure microcontrollers products, silicon imagers and smartcards.

As product engineer, you will manage the product industrialization phase (validation and qualification) by guarantying the best quality, cost, the time to market and to volume. On major projects, you will be assigned as project manager to lead our project team and to ensure project execution on commitment and communication with the customers.

As an engineering service company, travels are needed to support our customers or our suppliers. You will have opportunities for development into either mentorship/supervision roles or by expanding your knowledge spectrum and technical contribution scope.

Responsibilities

- Participate to the project feasibility phase, including risk analysis
- Manage and/or execute all tasks related to the product validation plan up to the qualification gate.
- Drive and control all product improvements during the sustaining activity (post qualification)
- Project management and technical reporting
- Provide technical guidance on the projects
- Validation of the qualification of the test solutions in a production environment, either in Meyreuil or at subcontractors overseas.

Requirements

- Minimum BS, MS preferred in Electrical Engineering (Bac + 5)
- Experience (5+ year) in product engineering, good experience in product development, diffusion process and reliability, knowledge on ATE (e.g., Advantest, Teradyne, Xcerra)
- Statistical analysis tools (e.g. Galaxy)
- Very good inter-personal skills, enthusiasm and drive
- Willingness to be flexible and accept new challenges
- Verbal and written English
